Thank you for choosing our company's products, the use of CNC products better and faster for you, please read this manual

Features: Features

1: integrated high-speed microcomputer intelligent control chip, with plug-in LCD display and hand, automatically detect the computer to automatically control the movement of the shield handle control functions, digital can simultaneously track record computer data and handle control mobile data

5: The driver XYZ-axis or Z axis of the knife can be done automatically, without complex computer software operation

6: up to 5A stepper motor drive current, adjustable.

7: up to 16 segments, more accurate, run more smoothly.

8: overload automatic protection function of the flow through the warm, protect your computer and peripherals .

9: bipolar constant-current chopper drive, low speed creeping phenomenon, noise, non-resonant region.

10: a closed optical isolation, two-stage signal processing, to fully protect your computer and equipment.

11:1 the road 0-10V/PWM governor signal output .

12: Rd input control, you can set the limit stop, which is divided into

the knife.									
Electrical properties (ambient temperature Tj = 25 °C):									
Input power	12 - 48V DC power supply								
Output current	4.5A (peak 5A)								
Driven	Bipolar constant-current PWM drive output								
approach									
The drive	42,57,86 stepper motor, two-phase -4 phase (4-wire, 6 wire, 8 wire								
motor	stepper motor)								
Weight	About 300 g.

Instructions:

Main interface icons

1: The coordinates of display range 9999.999/-9999.999

2: automatically records the computer running coordinates and manually move the coordinates

3: Automatic switch between computer and manual control

4: computer-controlled automatically shielded manual control functions, two seconds after the return to manual function

1: ST button to press the handle into the lower-level setup

menu, the setup is complete press the OK button to return

to the main work interface

2: Press the corresponding axis of the handle CL button four axis clear 0, according to the B1 replaced a line, press the OK button to exit the clear 0

3: The four-axis real-time recording computer running coordinates and manually move the coordinate value of the computer running data + manually move data

Automatic tool to set the icon

1: all settings automatic permanent preservation until the next set of updates

2: You can set the radius, put a knife height parameters

3: The driver auto-complete the knife, without the complexity of computer software operation, convenient tool change school knife, boot knife, batch processing adequately protected on the knife and other processed products correctly

1: In order to ensure the accuracy of the knife, the knife

before check put a knife to the height of the parameters

of the tool diameter is set correctly,

2: the need to make sure the knife instrument wiring and

limit switch wiring status is normal.

3: B2 keys and press to confirm OK to enter the automatic tool operation and automatically stop after the completion of.

4: Press the keyboard (A-) exit status of the school knife

4: input handles digital keys to set the digital parameters

Before the test machine, please note the following 1,A test machine first to 12V voltage test machine, 42-step, please with 12-16V/DC power 57 stepper choose 16-24V/DC power, 86 stepper election 24-36V/DC power 2,the stepper motor power and current (model) 3, to determine the wiring of the stepper motor $\vec{-}$ The pin definitions

Power is connected to 12 48V 8A (Optional according to the stepper motor operating current) above switching power supply, received marked on the power input interface.

 $12\mathrm{V}$ power output is used to pick up the $12\mathrm{V}$ cooling fan.

The spindle motor control is controlled through the parallel port PIN14. The

spindle motor voltage must comply with the supply voltage range.

 \equiv MACH software using the method

Figure 1, open the MACH3 software, now mach3MILL then select OK

Figure 2

MACH3 open the interface shown in Figure 2, above the action button, where we first configure the MACH software.
